- SWL: 2500kg
- Safety Factor 5:1
- Weight: 3.7kg each
- Pallet: 120 units

Concrete Washout bags can be collected and disposed of by any contracted waste collector/recyclers of your choice.

Our Solution: Silverback Concrete Washout Bags

- Dual-layer strength and protection with woven plastic.
- Holds up to 0.78m³ or 2500kg of waste.
- U-Panel design and construction: strong & reliable.
- Eco-friendly & legal-compliant.

Both solid and liquid wastes (slurry) will be contained in the bag. This eliminates harmful run off flows that create problems to storm water drains and creeks, thereby protecting our environment from damage. Concrete Washout bags can be stored in a dry place on-site or on your pump truck.

Bags are batch tested and compliant with Australian Standard AS3668-1989. Strong construction with long ties to attach to Pumper.

Concrete Washout slurry is contained by the ultra-strong bag which is easily attached to the pump mechanism of the pump truck to capture waste slurry. The bag is detached when the cleaning is completed.

Once the bag has dried (approx 24 hours), it can be moved by forklift or crane. Cured Concrete Washout bags can be stacked on top of each other, if needed, to save space.
